Passionate web developer offering a wealth of experience using HTML5, CSS3, JavaScript, node.js, MongoDB, and React.js for both front-end and back-end development.

### EXPERIENCE

#### Penitence Press - Front-End Web Developer — [Live Site](#)

A publishing company dedicated to restoring and publishing forgotten works.

- Designed UI/UX for functionality and simplicity
- Hosted the site using git and Netlify
- Incharge of communicating with the design team for the overall look of the site.

### PROJECTS

#### Knightbook — [Live Site](#)

Knightbook is a simplified clone of Facebook with a chivalrous twist

- Developed the front-end using HTML5, ejs, and bootstrap
- Built the backend from the ground up with node.js and MongoDB
- Utilized Google OAuth 2.0 for registration and login

#### Gratitude App — [Live Site](#)

Gratitude App is a web app that allows the user to record what they are grateful for

- Implemented intuitive user experience with React to be able to repeatedly call cards for gratitude notes.

#### Weather App — [Live Site](#)

Weather App allows the user to search the current weather data in any city

- Developed the front-end using React to keep the app as a single web page.
- Called OpenWeatherMap API to get the current weather data of any city in the world
